Kargamine CRM — Manual Test Guide

Part A — Prospect to Request for Proposal

1. Open CRM.
2. Click "+ New Prospect". Fill Identity tab.

   Identity tab — captures who the lead is: prospect source, prospect name, business type, and location(s). The basic record that makes this a trackable prospect.

   Required: Prospect Source, Prospect Name, Business Type, at least one Location.
3. Fill Contact Information tab.

   Contact Information tab — the people at the prospect's company: contact persons plus their phone/email/address channels.

   Required: at least one Contact Person.
4. Fill Requirements tab (optional).

   Requirements tab — the prospect's freight needs at intake time (container types, rolling/loose cargo, trucking, charter). A rough capture of what they're asking about, separate from the priced Products built later in the RFP wizard.

   Save the prospect.
5. Open the prospect → click "Request for Proposal" button. This mints a formal proposal request (RQ-code) for the prospect, starting the proposal pipeline.
6. Log in as superadmin/admin. Go to Proposals → Request.

   Proposals → Request — Management's queue of newly-created requests that still need an owner. Nothing can move forward until a CSR and RM are assigned here.

   Open the request. Assign CSR and Relationship Manager (both required). Save.
7. Log in as the assigned CSR. Go to Proposals → My Requests.

   Proposals → My Requests — the CSR's/RM's personal worklist of requests assigned to them. Clicking a row opens the RFP wizard to build out the actual proposal.

   Click the request row to open the wizard.
8. Fill Company Details tab.

   Company Details tab — the prospect's formal company name, registered address, and Authorized Signatory/signatories. This is the legal identity that will appear on the printed proposal/contract.

   Required: Company Name, Location Address, at least one Authorized Signatory.
9. Fill Origin & Destination tab.

   Origin & Destination tab — the pickup/delivery location pairs (lanes) this proposal will quote rates for.

   Required: at least one origin/destination pair.
10. Fill Products tab (optional).

    Products tab — the actual priced line items (containers, rolling/loose cargo, trucking, charter) going into the proposal. Buttons here let you copy/prefill a product form from the prospect's intake-time Requirements — click one, then fill in whatever's missing.

> **New — Build Rate Matrix tab:** once product lines exist, open this tab to set each line's pricing — click a product row to open its rate modal and fill in Base Rate / Adjustment / Total (fee breakdown rows are editable). This is where the actual quoted numbers get recorded.
> **New — Terms & Conditions tab:** Terms of Payment dropdowns (standard and charter) plus a grid of ancillary service fees (trucking, storage, loading/unloading, documentation). Sets the fine-print terms that go on the proposal.
> All three (Products, Build Rate Matrix, Terms & Conditions) are optional — submission does not require them.

11. Go to Confirmation tab.

    Confirmation tab — final read-only review of everything entered across the wizard, with the Submit button. Submitting is the point of no return for this request.

    Click Submit. This generates the Client Proposal for the request and sends it straight into the approval workflow (status Pending) — no separate "create proposal" step needed.

Part B — Approval and Signing (all within Proposals pages)

12. Log in as the Relationship Manager assigned in step 6 (or superadmin). Go to Proposals → Approvals.

    Proposals → Approvals — the queue of proposals awaiting a decision. Who can act on a given row depends on the team hierarchy (RM first, then their Manager) plus the proposal's own status.

    Open the proposal generated in step 11. Click Approve. This is the initial RM approval — status moves to Pending Manager Approval.

13. Log in as the Manager (or superadmin). Go to Proposals → Approvals. Open the same proposal. Click Approve. This is the final approval — status moves to Approved.

14. Go to Proposals → Signed / Contracts.

    Proposals → Signed / Contracts — holds proposals that have cleared approval. This is where the physically-signed copy gets uploaded to close out the deal, and where an accepted proposal can later be converted into a Contract.

    Open the approved proposal. Click Download.

15. Choose a signed file (.pdf/.jpg/.jpeg/.png). Click "Upload & Accept".

> **Known gap — confirm with dev before treating as a test failure:** this step now blocks with "This proposal has no rate lines - add at least one before marking it as signed" if the proposal has zero rows in its own rate table. Proposals generated from a submitted RFP (step 11) currently never populate that table — the Build Rate Matrix tab in step 10 saves to a different table (the proposal request's product rates). As written today, Upload & Accept will fail for every proposal that goes through this CRM flow. Flag this to the dev team; it looks like the rate data needs to be copied over (or the check relaxed) when an RFP-sourced proposal is approved.

Part C — Prospect detail: Proposals & Activity (verification, still on the CRM page)

16. Open the same prospect from CRM. In the prospect detail modal, confirm the default-open tab is Proposals.

    Proposals tab (prospect detail modal) — a read-only dashboard for this one prospect: every Request for Proposal raised against it, plus a chronological Activity & History log of everything that's happened (created, assigned, submitted, approved, signed, etc). Sits in the right rail below the "Request for Proposal" button, next to the Locations/Contacts/Requirements/Origin & Destination tabs which hold the prospect's own editable data.

17. Once the proposal is Approved or Accepted, confirm a PDF download link appears here too; once Accepted with a signed document attached, confirm a "Download Signed Copy" link also appears.

18. Confirm the Activity & History timeline shows entries for: prospect created, RFP requested, CSR/RM assigned, RFP submitted, and proposal approved/disapproved/rejected/cancelled/signed as applicable.
