

KARGAMINE • CRM OPERATIONS

Cold Call to Signed Contract

How a phone inquiry becomes a booking-ready client — traced against what the CRM and Proposal modules actually do, including the assignment-gate and manual-signature update just shipped.

Scope — Prospect intake → Request for Proposal → commercial proposal approval → signed acceptance

Source — app/Models & app/Http/Controllers, current build

Status — Approval step redesigned to RM → Manager (2-step, permission-gated); planned, not yet in the current build

● TEMP CSR (intake, trigger only)

● Management (superadmin + admin — assigns)

● Assigned RM & CSR (builds; RM gives 1st approval)

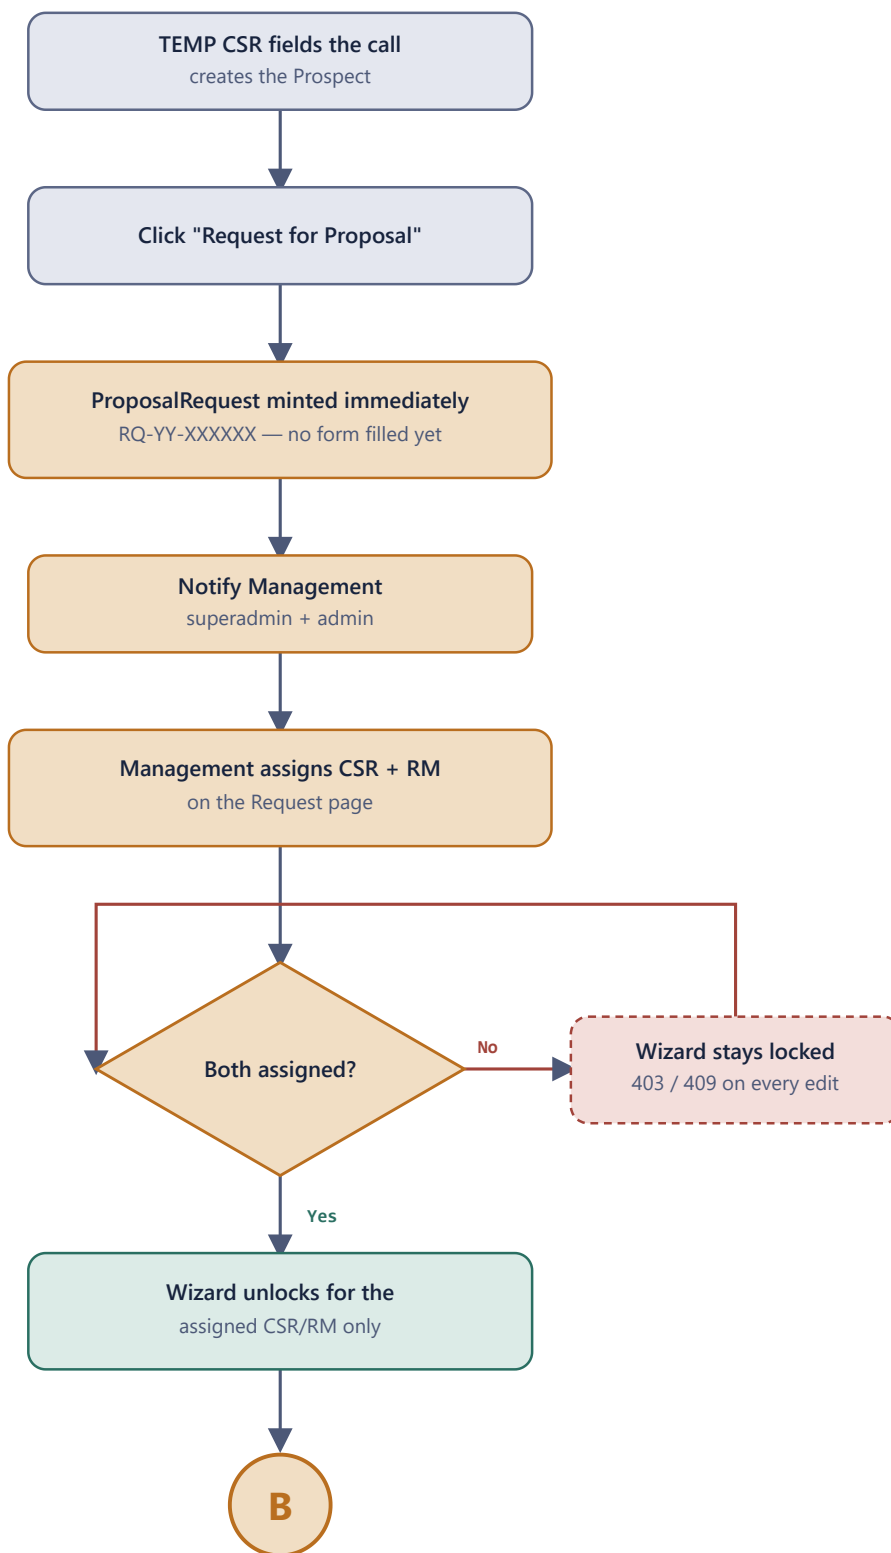

● Manager (2nd/final approval — new role, permission-gated)

● Client / Authorized Signatory

How to read the flow (next 4 pages). The flowchart is too long for one sheet, so it is split across **Page A → Page B → Page C → Page D**. Wherever the flow crosses a page break, the arrow runs into an -style circle — an *off-page connector*. The same lettered circle reappears at the top of the next page, feeding straight back into the same arrow, so you can follow the line across the page turn without losing the thread. Page A ends at a  connector; Page B opens with  and ends at ; Page C opens with  and ends at ; Page D opens with  and runs to the end. One terminal box — "Back to creator with remarks" — is drawn twice (Page B and Page C) rather than routed backward across a page, since both the RM checkpoint and the Manager decision return to it independently.

Flow · Page A — Intake & Assignment

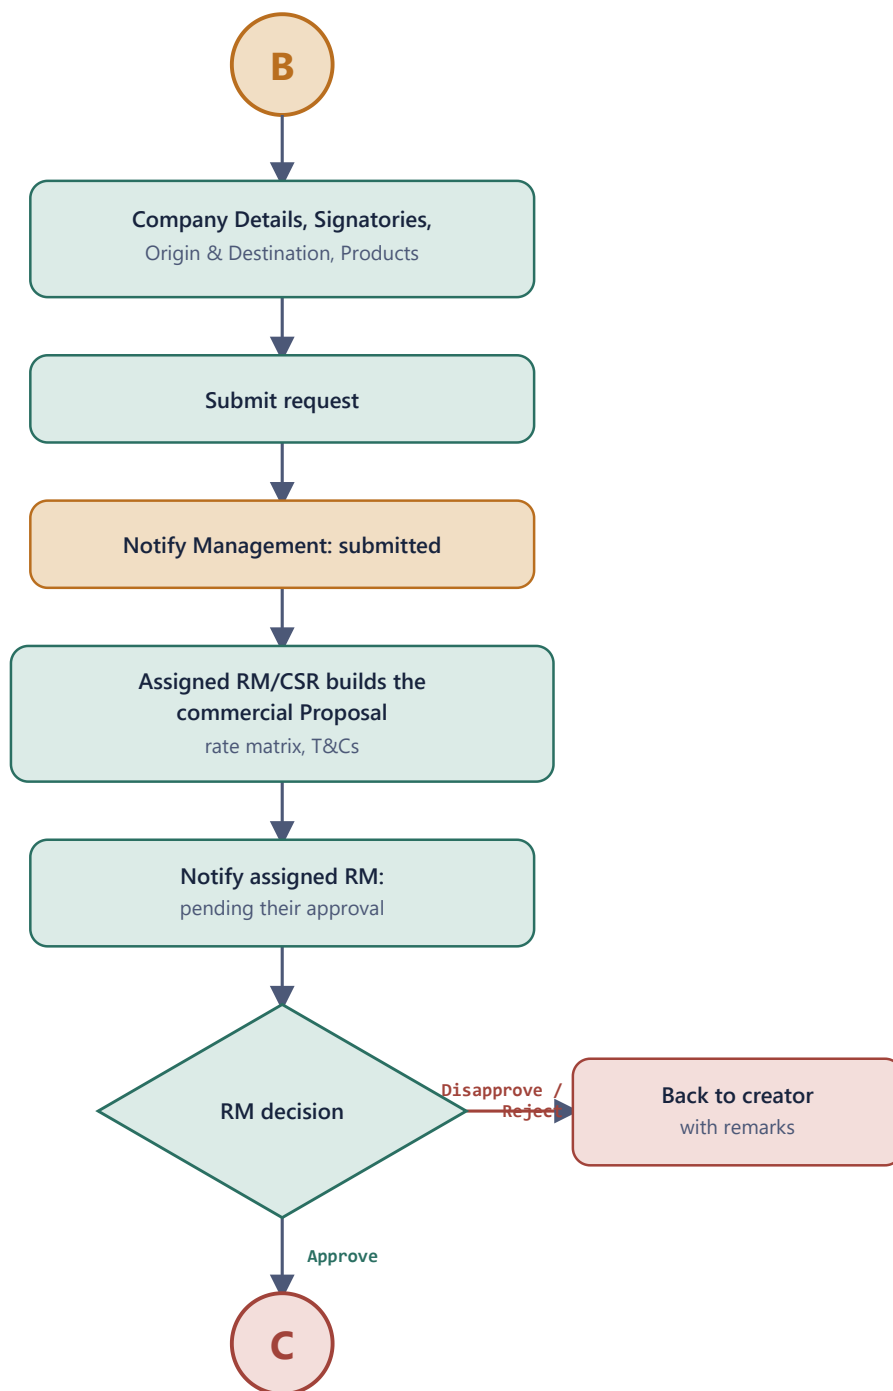

1 of 4

Continues on **Page B** via connector **B**. The No/loop (F → Z → F) is a same-page recheck: the wizard stays locked until Management has set both the CSR and the RM.

Flow · Page B — Request & RM Checkpoint

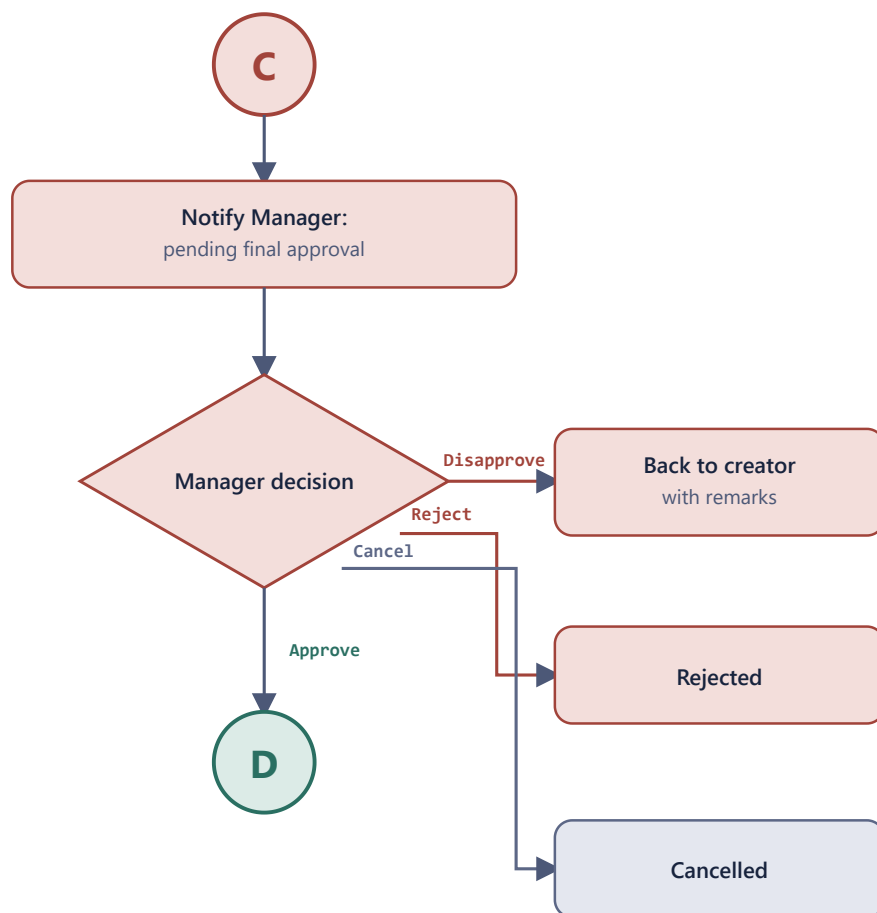

2 of 4

Opens from **Page A**'s connector **B**. On Approve, continues to **Page C** via connector **C**. Disapprove/Reject terminates here, back to the creator.

Flow · Page C — Manager Decision

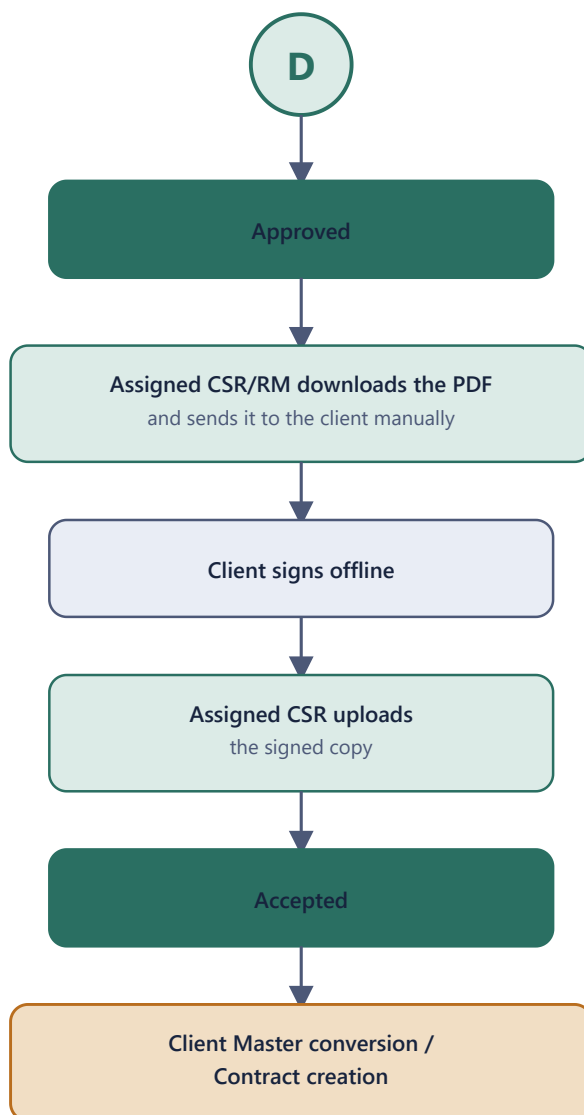

3 of 4

Opens from **Page B's** connector **C**. "Back to creator with remarks" is drawn again here deliberately – the Manager's Disapprove returns to the same place as the RM's, independent of Page B. Approve continues to **Page D** via connector **D**.

Flow · Page D — Approval, Signature & Conversion

4 of 4

Opens from **Page C's** connector **D**. Everything past "Approved" is manual end-to-end – no system email, no client self-service link.

PART ONE

Intake & Assignment

TEMP CSR

Client calls in

A CSR fields the inquiry and opens a new Prospect record.

TEMP CSR

Prospect record built

Identity → Contact Information → Requirements. No Relationship Manager field here anymore — that's Management's call now, made later.

Prospect::stageCompletionFlags()

TEMP CSR

Click "Request for Proposal" — that's it

The ProposalRequest is minted the instant the button is clicked. No company details, signatories, or locations are entered here — that's a locked wizard now, not this CSR's job.

ProspectController::storeProposalRequestNew()

SYSTEM

Notify Management

Fires immediately to every superadmin/admin user — not the deal's team leader, a fixed back-office role, since no CSR/RM exists to have a leader yet.

TeamNotifier · "proposal_request.needs_assignment"

MANAGEMENT

Assign RM & CSR

On the new Request page — sets assigned_to and relationship_manager_id together. Until both are set, the wizard below refuses every edit.

ProspectController::assignOwners() · AuthorizesProposalRequestAccess

PART TWO

Filling the Request, Then Building the Commercial Proposal

ASSIGNED RM + CSR

Wizard unlocks

Only the two people just assigned (or superadmin) can now touch it — everyone else gets a 403, and even they get a 409 if either assignment is somehow still missing.

```
AuthorizesProposalRequestAccess::authorizeProspectFullyAssigned()
```

ASSIGNED RM + CSR

Fill & submit the request

Company Details, Authorized Signatories, Origin & Destination, Products. Submitting flips draft → pending and now notifies Management — the one real gap from before, closed.

```
ProspectController::submitProposalRequest()
```

ASSIGNED RM + CSR

Build the commercial proposal

Booking types, cargo & ancillary services, the full rate matrix, terms & conditions — a separate object (ClientProposal) fed by what was just submitted.

```
ClientProposalController::storeForLead() / store()
```

PART TWO, CONTINUED

Approval Chain

PLANNED

SYSTEM

Submitted → Pending RM Approval

Saving the proposal notifies the deal's own assigned Relationship Manager — the first of two approval steps, replacing the old team-leader-pyramid notification.

Not yet built: permission "proposals.approve_rm"

PLANNED

ASSIGNED RM

First approval — forwards only

The RM's own approval is a checkpoint, not the final word: Approve sends it on to the Manager step. Disapprove/Reject sends it straight back to the creator with remarks, same as today's return behavior.

Gated by a Roles & Permissions checkbox, not a hardcoded role check

PLANNED

SYSTEM

Forwarded → Pending Manager Approval

Notifies whoever holds the new "Manager" role — a role the user adds to Roles & Permissions; it doesn't exist in setting_role yet.

Not yet built: permission "proposals.approve_manager"

PLANNED

MANAGER

Final review & decision

Amends build matrix, signatories, or T&Cs directly in the proposal before deciding — no separate edit step, the reviewer edits the pending record itself. This is the authoritative decision; the team-leader pyramid is no longer consulted.

At Pending Manager Approval, four outcomes — the Manager step carries the real authority now, not the RM checkpoint above:

Approve

Whoever holds the "Manager" approval permission, or superadmin.

Disapprove

Same reviewers as Approve. Remarks are required context for the sender.

Reject

The client's own assigned Sales Rep can reject their own deal, in addition to configured reject roles.

Cancel

The proposal's own creator, or whoever currently holds the approval permission at that stage — available while Pending RM Approval or Pending Manager Approval.

Disapprove / Reject (from either the RM checkpoint or the Manager decision) → notifies the creator with the reviewer's remarks; a revised proposal is resubmitted as a fresh Pending record.

ASSIGNED RM + CSR

Approved → download & send manually

No system email anymore. The assigned CSR/RM downloads the PDF and sends it to the client however they normally would — the old public self-service signing link is gone.

ClientProposalController::downloadPdf()

CLIENT

Signs & returns

Signs by hand or digitally, outside the system, then hands the signed copy back to the assigned CSR — not by uploading it themselves.

ASSIGNED CSR

Upload signed copy → Accepted

Open to anyone on the deal's team, leader included. This is what unlocks Client Master conversion and contract creation — now surfaced on its own "Signed / Contracts" page, split out of Approvals.

ClientProposalController::attachSigned() → canBeSignedBy()

PENDING

APPROVED

DISAPPROVED

REJECTED

CANCELLED

ACCEPTED

REFERENCE

Where this lives in the codebase

STAGE	MODEL / TABLE	KEY METHOD
Prospect intake & gating	prospects	Prospect::stageCompletionFlags()
Proposal request (RFP)	proposal_requests	ProspectController::storeProposalRequestNew() / submitProposalRequest()
RM / CSR assignment	prospects.assigned_to / relationship_manager_id	ProspectController::assignOwners() · Request page
Wizard access control	—	Concerns\AuthorizesProposalRequestAccess (403 / 409)
Commercial proposal	client_proposals + client_proposal_rates	ClientProposalController::store() / storeForLead()
Approval authority (current, live)	—	ClientProposal::canBeApprovedBy() / canBeRejectedBy() — team-leader pyramid
Approval authority (planned, not yet built)	permissions / role_permission	RM step: proposals.approve_rm · Manager step: proposals.approve_manager — checked on /page_roles_permissions
Signature & acceptance	client_proposals.signed_document_path	ClientProposalController::attachSigned()

Nav is now a "Proposals" category with three pages: **Request** (Management's assignment queue, new), **Approvals** (being redesigned to the two-step RM → Manager flow above), and **Signed / Contracts** (the post-approval tail, split out of Approvals).

Most of this page is live — including the parts that used to be gaps: the CSR-triggers-then-stops flow, the assignment gate, and the submit-time notification. The RM → Manager two-step approval and its Roles & Permissions gating (hatched "Planned" cards above) are the target design, not yet implemented in ClientProposal::canBeApprovedBy().
